

RAG

Trained up to a cut off date, beyond which it will not have an idea.

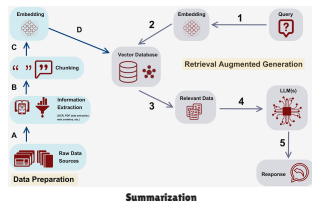

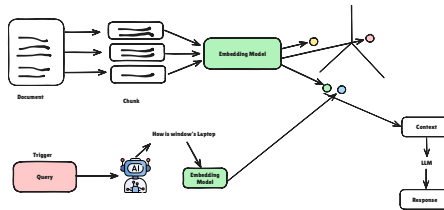

RAG

2 Steps Involved :-

1. RAG Pipeline to get data into the vector

2. RAG Agent to talk to our Vector DB

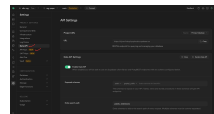

Summarization

Vector Stores → Supabase, Pinecone, Qdrant

We will be connecting with

Dgraph - to load the file → Direct Connection after logging in

Supabase - To create a vector column
We have to get Host/URL via Data API
we have to get secret from API Keys

We have a supabase DB
but no vector store table inside

RAG – ON Local n8n
