

Multi-Agents Architecture

Automation

AI Automation

Agentic AI Automation

We are using Multiple Agents for complex use cases.

Multi Agent System

Company Structure

Multi Agent System Architecture

Though there can be multiple different ways in which we can connect our Agents to each other in any framework there are some well defined architecture which can help us to define agents interaction and get good results.

Advantage of Balli Agent Architecture

1. Specialization and Efficiency.
2. Scalability.
3. Robustness and Adaptability.
4. Collaboration and Intelligence.
5. Cost-Effectiveness.

0. Agent with Many Tools - The problem which we get when we don't use multi-agent architectures, - it can hallucinate and give wrong results (not accessing calendar before replying to my appointment email) and ofcourse not robust enough.

Chain of Agents

Each agent will be configured with different brains, different prompt and different toolset much like us humans that making sure that the output is based on the expertise.

Parallel Agents

Controller Agents

Reactive Agent
(Feedback Loop)

Heirarchial Architecture

Planner - Executor Architecture

oil - demand increasing, majority in companies for exploring and producing.
