

n8n - Ran on

1. Natively ← on n8n website

2. Local ←

3. cloud - on any machine

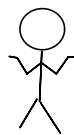

Device

aws, gcp, azure,
heroku, hostinger, digital ocean

Using whatsapp with n8n, requires you to port your existing whatsapp account to Business
thus messing up the overall whatsapp we use in everyday, hence going forward with telegram

Automation

Automation is something we have been doing via code or overall as well since long.

List out the Manual Process

Slack

Getting a message

or

everyday at 9 am

or

normally when you
check manually

Understand
message

AI

Don't try to unnecessarily include AI into your automation.

AI or AI Agents

Automation with AI Agents

Hi, Maybe my question is irrelevant.. but would ask.. how is 'data' stored/staged by n8n . rather does it store any or is it just orchestrating. Example for automating marketing workflows.. I want to send mails to my customer base. Does data move from my server to n8n application ? Thinking data privacy. I see there are some data manipulation nodes in n8n. Hence asking. I do understand it is Not an agentic AI question
